

ABSTRACT OF THE DISCLOSURE

A device for eliminating poisons and pollutants from the human body and for revitalizing cells includes a temperature controlled upper cover having a natural five primary substance stone coating layer, a temperature controlled lower mat having vibrators and a natural five primary substance stone coating layer, a herb essence supplier connected to the interior of space formed by the upper cover and the lower mat, and a negative ion producing air pump connected to the herb essence supplier for supplying negative ions. The device adjusts the temperature of a user in the interior space between the upper cover and the lower mat and discharges the poisons in the human body through perspiration holes on the skin by the action of the natural five primary substance stone and absorbed herbal essence.
